single or double wall ducting

IDEAL FOR LARGE SURFACES ✓

CUSTOMISABLE TO MEET ANY LIGHTING OR VENTILATION NEEDS ✓

◀ perspective view of an insulated double-wall channel grid

A fully customisable modular system that is ideal for providing lighting and/or ventilation to large surfaces. It utilises a grid of painted steel sheet double-wall or single-wall channels with insulation and an outer PVC coating. This system is designed to accommodate monolithic or continuous module skylights. To meet thermal insulation requirements, the skylights can be paired with a shading system, guaranteeing excellent performance.

Fittings are always included, and the 3D design ensures the appropriate type and quantity for each specific application. The individual skylights within the system can be either fixed or operable, offering complete adaptability to the customer's needs.
