

# CURBS

for straight corrugated panels

100% CUSTOMISABLE ✓

DESIGNED IN 3D FOR EASY ASSEMBLY  
WITH STEP-BY-STEP INSTRUCTIONS ✓

COMPATIBILITY WITH EVERY SANDWICH PANEL ✓

Curbs, to be assembled on-site, for coupling with double-slope roofs made of straight corrugated sandwich panels. These curbs can be positioned with either the short side or the long side parallel to the ridge. They are constructed with a C-shaped section of steel sheet with chromatic finishes. The height and insulation panel in polyurethane can be customized according to project requirements.

Each curb is equipped with an external closure lining and an L-shaped profile to be placed along the inner perimeter, sealing the thickness of the panel. Partially overlapped metalwork, with a polystyrene panel in between the upstream side of the curb and the ridge of the roof, ensures a tight seal of the element.

Fittings and step-by-step assembly instructions always included.
